DETAILED ACTION

Priority

Applicant's claim for domestic priority under 35 U.S.C. 119(e) is acknowledged.

Claim Rejections - 35 USC → 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

1. Claims 1, 5, 6 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Elson (Patent Number 4,895,496) in view of Sakurai et al. (Sakurai) (Patent Number 5,110,268).

Regarding claims 1, 5, 6 and 10, as shown in Figs. 1-3, Elson discloses a compressor assembly comprising: a housing (12); a stationary scroll member (28) fixed within the housing; an orbiting scroll member (30) disposed within the housing and engaged with the stationary scroll member; a motor; a crankcase (32) disposed between the motor (16) and the orbiting scroll; a bearing support member (34) fixed within the housing and having a bearing mounted thereto; an elongate shaft (26) rotatable about a shaft axis and having a first end and an opposite second end, the shaft extending through the crankcase and the motor, the first end operably coupled with the orbiting scroll, the bearing rotatably supporting the shaft proximate the second

Application/Control Number: 10/657,310

Art Unit: 3748

end, a counterweight (42) rotationally coupled with the shaft (26) proximate the bearing support member (34); an oil sump (not numbered; however, clearly seen in Fig. 1) disposed within an interior plenum defined by the housing (14); and an oil shield (12) having a plurality of flexible members mounting the oil shield to the bearing support (34), the oil shield (12) having a substantially cylindrical portion extending outwardly from the bearing support (34) and encircling at least a portion of the counterweight (42); the motor (16) includes a rotor (22) rotationally coupled to the shaft (26) and the counterweight (42) being disposed on the rotor. However, Elson fails to disclose the compressor being a horizontal compressor.

Sakurai teaches that it is conventional in the art to utilize a horizontal compressor. It would have been obvious to one having ordinary skill in the art at the time the invention was made, to have utilized the horizontal compressor as taught by Sakurai in the Elson device since both types of compressor are shown to be conventionally utilized to compress a liquid.

Allowable Subject Matter

2. Claims 2-4 and 7-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Prior Art

The IDS (PTO-1449) filed on September 8, 2003 and August 30, 2004 has been considered. An initialized copy is attached hereto.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure and consists of six patents: Horn (U.S. Patent Number 5,064,356), Siebel (U.S. Patent Number 5,176,506), Fain (U.S. Patent Number 5,372,490), Mitsunaga et al. (U.S. Patent Number

Application/Control Number: 10/657,310

Art Unit: 3748

6,322,339), Osada et al. (Publication Number JP 05-180178), and Kobayashi et al. (Publication

Number JP 06-235387), each further discloses a state of the art.

Communication

.Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Theresa Trieu whose telephone number is 571-272-4868. The

examiner can normally be reached on Monday-Friday 8:30am- 5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Thomas E. Denion can be reached on 571-272-4859. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
